Steps for setting up Alpine Miner in Netezza database server

Follow the steps below to set up Alpine Miner in Netezza database server on Linux system. It is assumed that Netezza database is already installed.

1. Copy Alpine Miner Netezza setup folder (setup/Netezza) to Netezza database host.

2. Login to the system as Netezza database administrator (e.g. nz) on the Netezza database host.

3. Change to the setup/Netezza directory

4. Create miner_demo user and miner_demodb database and install miner_demodb database：

Run command :

```
nzsql –f create_demo_netezza.sql
```

5. install procedure: run command:

```
Nzsql -f alpine_miner_setup.sql <database name> <username> <password>
```

For example:

```
nzsql -f alpine_miner_setup.sql miner_demodb miner_demo miner_demo
```
